

Uninstalling SQL Sentry

Last Modified on 18 March 2021

Uninstall SentryOne through the **Control Panel** in Windows. Before uninstalling, consider visiting [SentryOne Support](#) with questions or concerns.

To uninstall SentryOne (a monitoring service or client), do the following:

1. Open the Windows **Control Panel**.
2. Search for SentryOne and select **SentryOne Platform** (for the SentryOne Software/SQL Sentry monitoring solutions).
3. Select **Uninstall**.
4. Follow the prompts through Windows to complete the process.

Note:

- When you uninstall the SentryOne client or monitoring service, the associated program files are removed.
- User preferences stored in the registry are not deleted.
- The SentryOne database is not deleted.

⚠ Important: The .NET Framework files will not be removed when uninstalling SentryOne. Use **Add/Remove Programs** in the **Control Panel** to remove .NET Framework files.

Removing Watched Server Objects

⚠ Important: Please see the [Removing Watched Server Objects](#) article for scripts to remove the watched server objects from the target(s) after uninstalling SentryOne.

📌 Note: When you watch events on a SQL Server, SQL Sentry places a few objects in MSDB that facilitate its lightweight polling architecture. No agents are placed on the server. This enables SQL Sentry to monitor the server with a performance overhead that's typically less than SQL Agent. For more information about watched server objects, see the [Watched Server Objects](#) topic.
