

Database Mapper PostgreSQL

Last Modified on 15 July 2021

Update: SentryOne Document is now SolarWinds Database Mapper (DMR). See the [Database Mapper product page](#) to learn more about features and licensing. Want to explore Database Mapper? An interactive demo environment is available without any signup requirements.

PostgreSQL

Solution Item Icon	Solution Item Description
	<p>Database Mapper allows you to document databases across major versions of PostgreSQL. See the System Requirements article for details on prerequisites.</p> <p>Note: PostgreSQL is a database-level provider. Lineage is not generated for this solution item type.</p>

Adding PostgreSQL

Add an **PostgreSQL** solution item to your Database Mapper solution by completing the following steps:

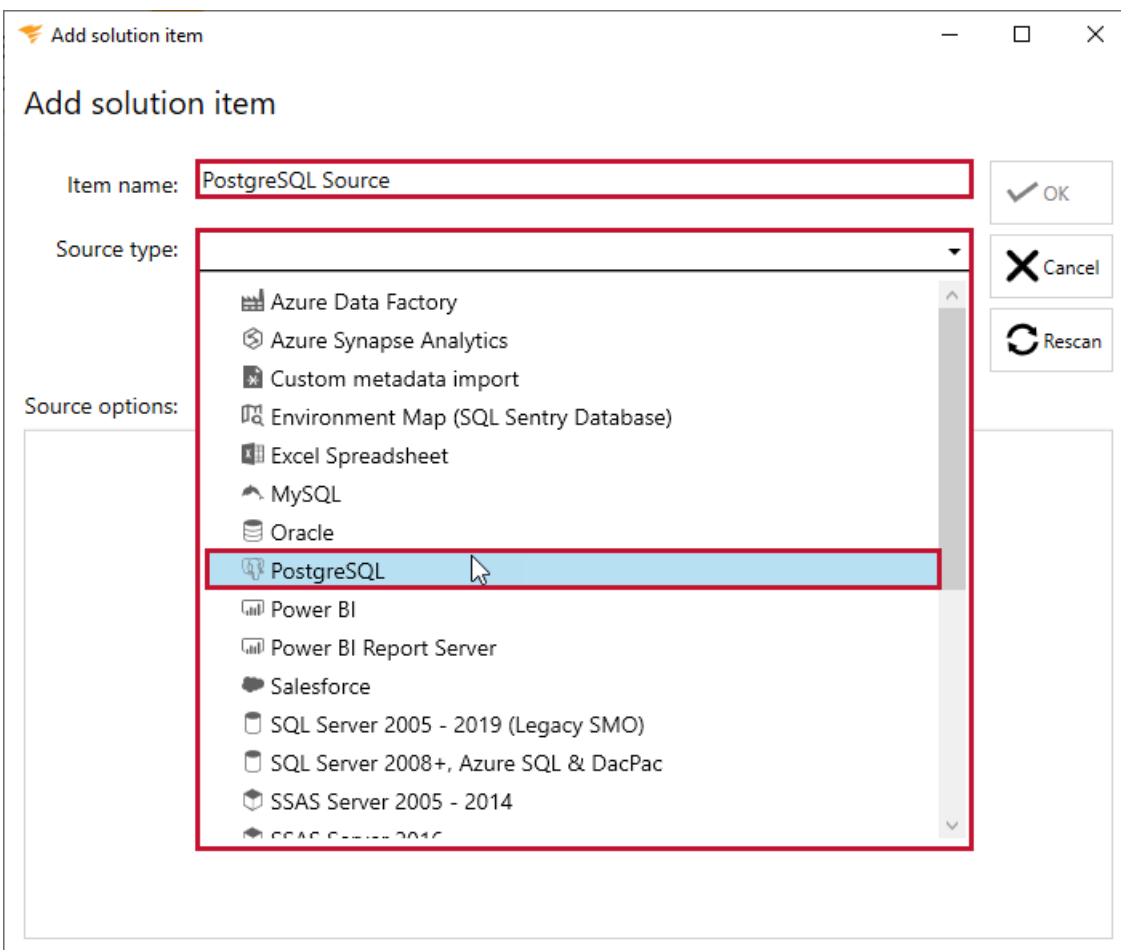

1. Select **Add** to add a new solution, or select **Open** to open an existing solution in the **Configuration Tool**.

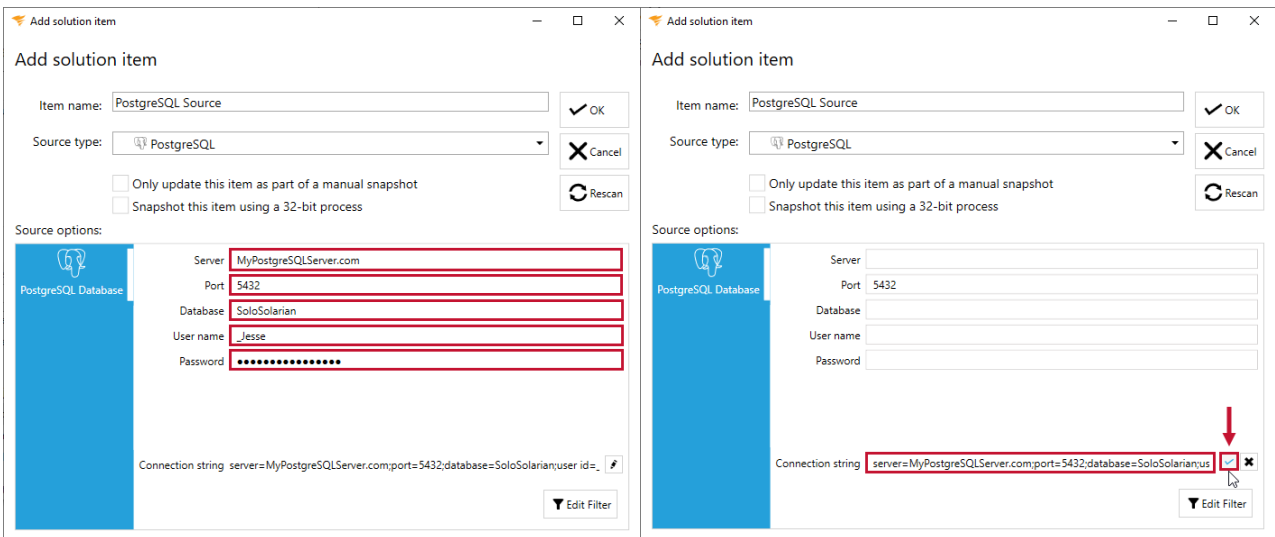

2. Select **Add** to open the **Add Solution item** window.

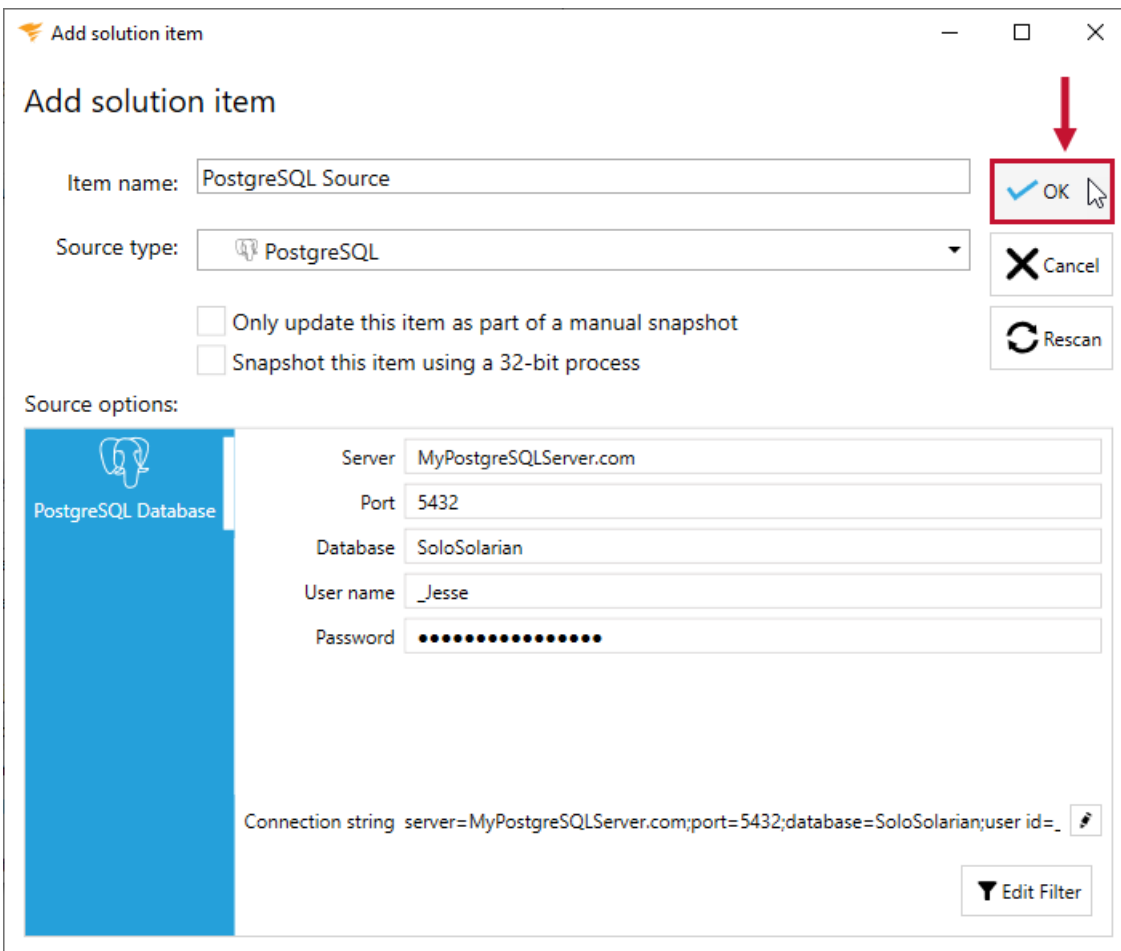

3. Enter an item name, then select **PostgreSQL** from the **Source type** drop-down list.

4. Select **PostgreSQL** then enter a valid connection string. You can either copy and paste a connection string into the **Configuration Tool** or edit the individual values.

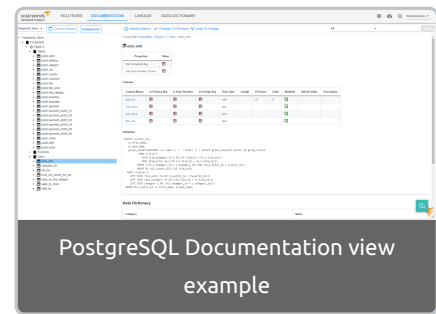

5. Select **OK** to add the **PostgreSQL** solution item to your Database Mapper solution.

PostgreSQL Solution Item Documentation

[Additional Information](#): You need to take a snapshot of your solution and **PostgreSQL** solution item before viewing any documentation. For more information about taking a snapshot, see the [Generating Documentation and Scheduling a Snapshot](#) articles.

After adding a solution with your **PostgreSQL** solution item, and taking a snapshot, you are ready to view your documentation.

[Additional Information:](#) For more information about the Documentation tab in Database Mapper, see the [Documentation](#) article.
